If you're going to have a vault for a lifetime, do it right the first time!
WHAT MAKES A FORT KNOX VAULT?

Unibody Quadra-Fold Construction

Dual Door Plates That Cover 100% of the Door Face

*Slip Clutch Handle

*Redundant Locks

*Heavy Duty Corner Bolts

Outer Body

Type C Fireboard

1/8" Thermal Gap

Stud Welds

*Inner Steel Liners Up To Four Layers

High-Temperature Silicone Smoke Seal

Heat Expansion Seal

*Available On Select Models
At Fort Knox, we believe your valuables deserve the highest level of protection and security. From the thickest steel bodies in the industry to tamper-proof engineering, Fort Knox vaults are built to deter even the most determined intruder.

**PREMIUM THEFT PROTECTION**

SOLID WELDED SEAMS
Fort Knox vaults are made of steel that’s machine folded and formed to minimize joints. The few seams that do remain are seam-welded both inside and out for 100% joint penetration. Some competitors cut corners by using stitch welds, broken up by space gaps along the joint making the safe weaker and susceptible to fire and heat damage.

CORNER BOLTS
Fort Knox locking bolts are among the thickest diameter in the industry and our specially-designed corner bolts provide maximum protection against intruders who attempt to pry the corner of the door.

SLIP-CLUTCH HANDLE
Fort Knox vault handles include a mechanism that slips if the handle is forced or overturned. This protects your locks and door mechanisms from damage. Not available on Maverick Models.

DOOR PLATE COVERAGE
We construct every Fort Knox vault door with dual steel plates that cover the entire dimensions of the door—from top to bottom, side to side. Some manufacturers only cover the lock mechanism.

REDUNDANT LOCKS
We offer an optional multi-locking system that includes a keypad lock for quick access and a keyed combination lock, making your vault resistant to break-ins and EMP attacks.

SAFE WITHIN A SAFE
Fort Knox vaults are made of the thickest, high-grade steel bodies to ensure your valuables stay secure. Customize your vault by adding torch-resistant stainless steel, drill-resistant AR500 steel, and up to four layers of carbon steel liners to the interior—essentially creating a safe within a safe—for maximum protection.
Imagine your valuables trapped in a hot oven. Now imagine them in a pressure cooker. Without adequate fire protection, a safe is useless against the damaging effects of heat, smoke and pressure. At Fort Knox, we’ve developed rigorous fire protection engineering that allows our vaults to withstand the highest temperatures for the longest time. Superior fire protection ensures that your valuables are protected from heat and smoke damage.

OUTSTANDING FIRE PROTECTION

HEAT TRANSFER
Fort Knox vaults are engineered to keep your valuables cool and protected. Our vault design and engineering allow for thermal expansion of the steel vault body without damaging the integrity of the fire liner’s fit & function. Many manufacturers install drywall without dead air space. Drywall installed without dead air space allows for radiant heat to transfer directly to the interior of the safe causing temperatures to increase at a faster rate.

FIRE LINER
Fort Knox is the only company in the industry to use a fire barrier manufactured with vermiculite and glass fibers. Vermiculite absorbs humidity, increasing its fire-retardant capabilities, while glass fibers help the miter-cut boards retain their structural integrity.

THERMAL BARRIER
Fort Knox vaults have an engineered space between the outer body and fireboard. This dead air space significantly reduces heat transfer by keeping scorching hot metal from touching the fireboard.

STUD WELDING
Some safe manufacturers use glue to adhere drywall as their fireboard to the inside steel of the safe. When exposed to heat, glue boils and melts, causing drywall to slide off, dry out and crumble. At Fort Knox, we secure our components with welded metal studs, then strap them in for superior protection.

DUAL DOOR SEALS
Every Fort Knox vault has two heat-activated seals around its door—one to keep out smoke, the other to keep out heat. As heat increases, the seal’s swell, creating a vacuum effect that prevents flames and extreme heat from entering your vault.

FIRE TEST
Combined, all of these cohesive features work together to protect your valuables from extreme heat. To ensure maximum protection, Fort Knox puts their vaults through rigorous tests consistent with heat generated in a house fire. Fort Knox vaults consistently provide superior fire protection, up to 1,680° for 90 minutes, while keeping the vault interior temperature under 350° Fahrenheit.

MAVERICK VAULT

Construction Makes The Vault

Don’t be fooled by the price, the Maverick Vault is a formidable, fully-featured entry-level vault. Compare its heavy 11 gauge body thickness and vastly greater door thickness to most competitor’s mid to upper-level safes. This vault is perfect for budget-minded buyers looking for great value.

Executive 6637 Copper Finish with Redundant Lock and Finial Handle Shown
The Defender Vault is our workhorse. Its design standards are superior to the high-end products of most other manufacturers. Compare the steel thickness, details, value and security of the Defender Vault and see how it stands out from the rest of the safe industry.

Defender Vault Features:
- **Steel Body Thickness**: 10GA
- **Locking Bolts**: 13
- **Door Steel Thickness**: 3/16" Steel Plate, 2 Fire Walls, 10GA Door Shell
- **Fire Protection**: 1680°F In 90 Minutes
- **Door Edge Steel Thickness**: 1/2" (.51)
- **Optional Features**: Lights, Dehumidifier, Door Organizer

- 37" 44 Guns
- 41" 52 Guns
- 51" 68 Guns
- 61" 84 Guns

**COLLECTOR CONFIGURATION**

- 26" 18 Guns
- 31" 40 Guns
- 37" 48 Guns
- 41" 57 Guns
- 51" 73 Guns
- 61" 100 Guns

**Cabinet Configuration**

- “External hinges only. Number of guns determined by cabinet placement and vault size.”
ACCESSORIES

**LED LIGHT SYSTEM**
Full coverage LED lights or single bar across the top of vault interior.

**DOOR ORGANIZER**
Covers inside door panel with pockets and velcro.

**FINIAL PULL HANDLE**
Recommended on vault doors and all vaults greater than 37” wide.

**VAULT DRAWER SYSTEM**
1 file drawer, 3—2” drawers, 3—1½” drawers. Felt Lining optional.

**MIRROR**
Mirrored back wall enhances visibility. Half and full back wall options available.

**DEHUMIDIFIER**
Recommended to control humidity.

**CONTROLLED ACCESS BOXES**
Heavy duty security box for storing about anything. Choose from 20”, 24”, 28”.

**PISTOL BOXES**
10 gauge bodies with Simplex 5 button quick access lock. Choose from three sizes.

SAFE WITHIN A SAFE

**Exponential Theft Protection**
For added security and maximum protection, Fort Knox offers additional security levels to line the inner walls of your vault. Additional steel liners increase wall thickness and provide further barriers against breaches. Only Fort Knox provides industry-leading security with the ability to add multiple steel layers.

**10-GAUGE CARBON STEEL**
Extensive protection against attack.

**3/16”**
120x stronger than carbon steel.

**10-GAUGE STAINLESS STEEL**
Cutting torch resistant.

**UPGRADES**
Maximize Your Protection

- **STEEL BODY UPGRADE**
  Increase body to 3/16” or 1/4”.

- **REINFORCED FIRE LINER**
  Increase your fire protection rating to 2 hours.

- **CORNER BOLTS**
  1 ½” corner bolt on each door corner.

- **STEEL DOOR UPGRADE**
  Increases full door plate by 1/8”.

WARRANTY

**The Best Warranty In The Industry**
Many safe companies advertise “lifetime” warranties, however they place limits or exclusions on locks, door mechanisms, handles and other key components that are most likely to fail over time. You won’t find that in the Fort Knox lifetime warranty. The Fort Knox lifetime warranty covers everything.
FORT KNOX FAQ

SECURITY
More Steel Equals Higher Security

WHY IS THE STEEL PLATE IN THE DOOR SO IMPORTANT?
Fort Knox steel door plates cover 100% of the door, top to bottom and side to side. This provides the best protection against door attacks.

WHY ADD INNER-STEEL LINERS TO MY VAULT OR VAULT DOOR?
Additional steel increases security. It’s that simple. Add 3/16” AR500 steel to withstand cutting/drilling and 10 gauge stainless steel to counter torch attacks.

ARE CORNER BOLTS NECESSARY IN THE DOOR?
Corner bolts provide additional protection against pry attacks which will usually start at the corner of the door.

KEY FEATURES
The Difference Is In The Details

WHAT SIZE VAULT SHOULD I BUY?
Three primary factors should be considered when choosing a size: (1) How many long guns (2) How many other items and (3) Where it’s going to be stationed. Rule of thumb: always buy the next size larger than you think you’ll need.

HOW DO I DETERMINE THE LOCK I NEED?
Manual dial locks can be more difficult to use than a keypad, and it takes longer to access your contents. Keypad or E-locks use a 6-8 digit code entered on a keypad and provide quick access (batteries are required). Redundant locks use both E-lock and manual dial locks. This provides quick entry and protects your vault from EMP attacks.

WHAT IS THE DIFFERENCE BETWEEN INTERNAL AND EXTERNAL HINGES?
Internal hinges open to about 90° and give a vault a sleek minimalist look, while external hinges open to a full 180°. Hinges are a preference and do not impact your vault’s security or fire protection.

ARE FORT KNOX LOCKS EMP PROOF OR EMP RESISTANT?
Fort Knox provides three types of locks: (1) mechanical dial—EMP proof which cannot be affected by an EMP pulse; (2) E-lock—our E-locks are rigorously tested against EMP and are considered EMP resistant; (3) redundant lock system combines a mechanical dial with an electronic keypad. Each lock works together, but independently, and provides the best protection against EMP attacks.

FIRE PROTECTION
Ready To Block The Worst Flames

WHAT BENEFIT DOES THE REINFORCED FIRE LINER (RFL) ADD TO MY VAULT?
RFL is an additional fireboard wall that increases the standard fire protection already engineered into the vault. It uses a small amount of interior space but expands your fire protection up to 120 minutes.

DOES THE TYPE OF FIREBOARD MAKE A DIFFERENCE?
Fort Knox uses superior Type C fireboard that contains vermiculite and glass fibers. This helps the fireboard retains its structure and fire retardant properties during extreme temperatures. Many other manufacturers use regular drywall or Type X which will lose its structural integrity during high temperatures.

HOW DO THE DOOR SEALS ASSIST IN FIRE PROTECTION?
Dual door seals protect against fire and smoke. They swell when temperatures reach a certain point, keeping harmful elements from entering the vault.

FIRE TESTING
Comprehensive Fire Simulation

Inferno Shield Level 90 – Fire Simulation Results

Nine heat sensors are placed evenly from top to bottom as per UL72 standards. Because heat at the top of the vault can be 100 degrees hotter than the air at the bottom, the test is terminated once the first sensor reaches 350 degrees.
