PROTECT WHAT MATTERS MOST
OUTSTANDING FIRE PROTECTION

Fort Knox strives to protect your valuables in the most violent of conditions. Without adequate fire protection a safe is useless against the damaging effects of heat, smoke and pressure. A home fire burns hot and fast, taking those things from you that matter most. At Fort Knox, we've developed rigorous fire protection engineering that allows our vaults to withstand the highest temperatures for the longest time. It is important to combine time and temperature, not just focusing on one and neglecting the other.

FIRE TEST

To ensure maximum protection, Fort Knox subjects their vaults through rigorous tests that pushes our fire protection engineering to the upper limits. Fort Knox vaults pass a stringent rigorous test where thermocouples in the top, middle and bottom of the vault to ensure consistent, reliable results. Testing vaults up to 1,880 degrees in 90 minutes, while keeping the vault interior temperature below 350 degrees Fahrenheit, makes Fort Knox the leader in the industry.

HEAT TRANSFER

Fort Knox vaults are engineered to keep your valuables protected from the intense and violent heat of a fire. Our vaults are designed and engineered to minimize the transfer of heat from the outer body to the interior space. These features combined with thicker steel doors and vault bodies work to reduce heat transfer.

FIRE LINER

Fort Knox is the only company in the industry to use a fireboard manufactured with a proprietary blend of components that contain shrinkage compensating additives. The fire barrier has fire-retardant capabilities and increased fibers help fireboard retain their structural integrity. Combining mechanical welded mounting studs and a thermal barrier, Fort Knox gets more fire protection without sacrificing space on the inside of your vault.

THERMAL BARRIER

Our vaults have an engineered thermal break between the outer body of your vault and fireboard. This thermal break significantly reduces heat transfer by keeping scorching hot metal from touching the fireboard reducing heat transfer. The thermal barrier allows hot air to rise up the sides and circulate within the safe and this allows our fireboard to protect your valuables for a longer period of time in the event of a home fire.

MECHANICAL ANCHORS

At Fort Knox, we secure our fireboard components with metal mechanical anchors that are welded to the outer steel wall. Metal straps are used to secure the fireboard in place that in turn gives support to our shelf components. Other safe manufacturers use glue to adhere their non-proprietary fireboard directly to the steel wall of their safe. When exposed to 500 degrees glue will boil and melt, causing fire board to absorb heat, separate and slump away from the walls of the safe, dry out and crumble. At 500 degrees the glue will also begin to release toxic gas that could leave a caustic residue, destroying valuables.

DUAL DOOR SEALS

Every Fort Knox vault has two seals around its door – the first seal keeps smoke, caustic residues and heat directly entering your vault until the second seal is heat activated. As the fire intensifies increasing the safe temperature to 212 degrees, the Palusol seal swells, creating a sealing effect around the door that prevents flames and extreme heat from directly entering your vault.

PREMIUM THEFT PROTECTION

At Fort Knox, we believe your valuables deserve the highest level of protection and security against hostile attacks. From the thickest steel doors and bodies in the industry to tamper-proof engineering, Fort Knox vaults are built to deter even the most determined intruder.

100% DOOR PLATE COVERAGE

We construct every Fort Knox vault door with dual steel security plates that cover 100% of the door—from top to bottom and side to side. Some companies manufacture their composite doors with a security plate that only covers 60% of the door, or just the locking mechanism.

SOLID WELDED SEAMS

Fort Knox vaults are made of American steel that’s machine folded and formed to minimize joints. The few seams that remain are welded for 100% penetration. Some companies cut corners by using stitch welds, which leave gaps along the joints, making the safe weaker and more susceptible to attack, heat, and fire damage.

SAFE WITHIN A SAFE

Fort Knox vaults are made of the thickest, high-grade steel, bodies to ensure your valuables stay secure. Customize your vault by adding torch-resistant stainless steel, drill-resistant AR500 steel, or multiple layers of carbon steel to the interior for a total of 4 additional steel liners—essentially creating a safe within a safe—for maximum protection.

CORNER BOLTS

Fort Knox locking bolts are among the thickest diameter in the industry, at 1.5 inches. Our specially designed corner bolts option provides maximum protection against intruders who attempt to pry the corner of the door. *Standard on Legends, Titans and Guardians. Optional on Defenders, Protectors and Executives.

MULTIPLE RELOCKERS

Fort Knox uses multiple relockers in a variety of locations throughout the door. By adding multiple relockers the Fort Knox door will foil attacks from any direct assault. Don’t settle for only one line of defense; multiple relockers are essential for maximum security.

SLIP-CLUTCH HANDLE

Our vault handles include a mechanism that will slip if the handle is forced or overturned. This protects your lock and door mechanisms from damage. Not available on Spartan Models.
WHAT TO KNOW

SECURITY
More Steel Equals Higher Security

WHY IS THE STEEL PLATE IN THE DOOR SO IMPORTANT?
Fort Knox dual steel door plates cover 100% of the door, top to bottom and side to side. This provides up to 1” of steel in the door and improves the best protection against door attacks. Other safe manufacturers sell a composite door and security plate that only covers 60% of the door. This leaves only a thin shell covering the face of the door and only partial coverage to support the lock and handle, giving their safe the illusion of strength and security.

WHY ADD INNER-STEEL LINERS TO MY VAULT?
Additional steel increases security. Fort Knox allows you to add up to 4 additional steel liners to protect what matters most. Add a Layer of 3/16-inch AR500 steel to withstand cutting/drillling, a 10-gauge stainless steel liner to counter torch attacks, or multiple carbon steel liners to increase strength and security. Combine liners up to four layers thick to optimize the protection needed.

ARE CORNER BOLTS NECESSARY IN THE DOOR?
Corner bolts provide additional protection against pry attacks which will usually start at the corner of the door. Available on most models.

FIRE PROTECTION
Ready To Block The Flames

WHAT BENEFITS DOES INFERNO SHIELD FIRE PROTECTION ADD TO MY VAULT?
Choosing the correct fire protection is one of the most important decisions of your vault purchase. Fort Knox offers different levels of Inferno Shield fire protection. The Spartan 1450° in 50 minutes. The Maverick 1200° in 75 minutes. The Defender/Protector 1000° in 120 minutes. The Executive 950° in 180 minutes. The Spartan/Executive Bundle: Corner Bolts, Lights, Pull Handle and Dehumidifier. Fort Knox offers superior proprietary Type C fireboard which will usually start at the corner of the door. Available on most models.

WHAT SIZE VAULT SHOULD I BUY?
Three primary factors should be considered when choosing a size:
- Number of long guns
- The size, shape and volume of other valuable items
- Where it’s going to be stationed.
Always buy the next size larger than you think you’ll need. Allow your vault to grow and expand with you as your collections grow and your needs increase.

HOW DO I DETERMINE THE LOCK I NEED?
Electronic locks offer a more traditional look and style, providing you long term dependability and little maintenance. Electronic locks are increasing in popularity because of their ease, speed and convenience. The electronic lock with its easy to read key pad is simple to use and allows the owner to easily add or change their combination. Batteries are needed and are easily changed. Redundant locks combine the traditional mechanical style lock and the electronic lock. The combination of mechanical and electronic locks gives you the choice of using the traditional mechanical lock to open your vault or have the ease and convenience of the electronic lock.

FORT KNOX PROVIDES THREE TYPES OF LOCKS:
- Mechanical Dial: EMP proof which cannot be affected by an EMP pulse;
- Electronic locks offer same security as mechanical locks and are EMP resistant;
- The redundant lock utilizes both the mechanical and electronic lock allowing ease of access and are EMP proof.

WHAT IS THE DIFFERENCE BETWEEN INTERNAL AND EXTERNAL HINGES?
Internal hinges open past 90 degrees and give a vault a sleek minimalistic look, while external hinges open to a full 180 degrees. Hinges are a preference and do not impact your vault’s security or fire protection.

PAYING FOR YOUR VAULT
Flexible Plans on Any Budget

IS FINANCING AVAILABLE?
Once you determine which safe is best for you, financing is available to make the necessary purchase to protect what matters most to you. Flexible payment plans are available on any budget.

MAKE IT A BUNDLE
Save by Choosing a Bundle Package

NEW FOR 2020 WE ARE INTRODUCING THE BUNDLE
Fort Knox is known for being able to customize your safe making it unique to you. This year we are making it easier to customize your vault with our Bundles Packages. We have taken the most popular accessories and combined them together into one easy bundle.

Spartan/Maverick Bundle: Door Organizer, Lights, Hinge Caps and a Dehumidifier.
Defender/Protector/Executive Bundle: Corner Bolts, Lights, Pull Handle and Dehumidifier.

LIFETIME WARRANTY
The Best Warranty in the Industry

GUARANTEED AMERICAN QUALITY
Fort Knox warrants to the original purchaser, that each new vault will be free from defects in material and workmanship for the lifetime of the original purchaser from the date of delivery. Integral units such as locks are subject to this same warranty.

BURGLAR ATTACK
Fort Knox will repair or replace any vault damaged due to an unlawful or forced attempt during the lifetime of the original purchaser.

INCIDENTAL DAMAGE PROTECTION
Fort Knox will repair or replace, at our option, any vault due to incidental damage as a result of accident, flood, or fire.

GO TO FORTKNIX.COM FOR WRITTEN WARRANTY AND FREIGHT RESPONSIBILITIES.

FIRE TESTING
Comprehensive Fire Simulation

Nine thermocouples are placed evenly from top to bottom as per UL72 standards. Because air at the top of the vault can be hundreds of degrees hotter than the air at the bottom, the test is terminated once the first sensor reaches 350 degrees. These testing standards ensure an honest reliable test.

**TITAN VAULT**

**Securing Your Possessions**

The Titan Vault begins with a 3/8” thick dual body constructed of a 3/16” carbon steel body, and 3/16” Armaknox AR500 inner steel liner. The standard inner AR500 steel liner gives you safe-within-a-safe style security and provides superior protection. In addition to dual steel bodies the Titan has a massive 3/4” door edge thickness held in place by 20 locking bolts.

**TITAN VAULT FEATURES**

- **FIRE PROTECTION**: 1680°F in 90 Minutes
- **OVERALL BODY STEEL THICKNESS**: 3/8”
- **DOOR EDGE STEEL THICKNESS**: 3/4”
- **CORNER BOLTS**: Standard

When Only The Best Will Do

The industry-leading Legend Vault offers a 1/2" steel body comprised of layered carbon steel, stainless steel and AR500 steel. The Legend has maximum theft and breach protection against cutting or torching. The 55 rack and pinion matching machined gears give the Legend an exclusive opening system that only Fort Knox provides.

VAULT DOOR IN-SWING

All Collections Grow
Fort Knox In-Swing doors are a perfect solution if you want to place a vault door behind a concealment door. The In-Swing door also works great for panic rooms and storm shelters and they can be reinforced with stainless steel, AR500 steel and additional layers of carbon steel.

Rest Assured
Fort Knox vault doors ensure all of your valuables are safe and secure. Available in two different sizes, each vault door is built from thick, hardened steel. Need extra protection? Add additional steel layers of cut-resistant AR500 steel, torch-resistant stainless steel, or carbon steel. Only Fort Knox gives you complete theft protection.

VAULT DOOR FAQ’S

Know Before You Buy

ROUGH OPENING DIMENSIONS
Rough opening is the recess in the wall in which the Vault Door will be installed. Measure Height and Width.

Standard Rough Openings are:
82" H x 40" W or 82" H x 48" W

WALL THICKNESS
Your Vault Door frame dimensions are specific to your wall thickness. Provide the dimension of your wall thickness to ensure a proper installation.

Standard wall thicknesses 6”-12”
Custom Thickness Available

IN-SWING VS OUT-SWING
In-Swing doors can be used as a storm shelter or panic room. The in-swing door is also ideal for hiding or concealing the location of your vault. Out-swing benefits those with limited vault room space.

RIGHT SWING VS LEFT SWING
We define right vs left swing based on which side the hinges are on. Standing outside the room facing the front of the door your hinge will be on the right or the left. In the picture shown the door is a right swing.

CONCEALED HINGE VS EXTERNAL HINGE FOR OUT-SWING
Out-swing safes allow for the option of choosing a concealed hinge or external hinge allowing 180° swing radius.

Display your Vault (Adds 4”)

SECURITY BOXES

Secure your handguns or possessions in one of our strong and secure personal security boxes. Fort Knox security boxes and handgun safes meet the highest standards and exceed all California Department of Justice requirements. Security boxes are not rated for fire protection.

ORIGINAL PISTOL BOX
The Heaviest Pistol Box on the Market

The Original Pistol Box offers a quick access lock and a strong, heavy design. Constructed of a rugged 10-gauge body and a massive 3/16” wrap around door, this box exceeds the California Firearms Safety Device Requirements.

ORIGINAL PISTOL BOX: 22”W x 4”H x 10”D = 22LBS

PISTOL BOX
Protect your valuables

Choose from one of these three sizes for maximum storage. These new high-security Pistol Boxes are constructed with a heavy 10-gauge body and 3/16” plate door. The 6” deep version (Auto) is great for an automobile while the 12” (Personal) can be used in many applications. The larger Shotgun box is great for storing your self defense shotgun for quick easy access.

AUTO PISTOL BOX: 9½”W x 5”H x 6”D = 23LBS
PERSONAL PISTOL BOX: 9½”W x 5”H x 12”D = 20LBS
SHOTGUN BOX: 9½”W x 5”H x 45”D = 64LBS

CONTROLLED ACCESS BOX
Secondary Privacy Box

The Controlled Access boxes are great for storing ammo and other valuables. They can be used as a standalone security container or inside your vault for an additional layer of security. They come in three sizes for your convenience.

CA20: 20”W x 9”H x 12”D = 43LBS
CA24: 24”W x 8”H x 24”D = 55LBS
CA28: 28”W x 8”H x 24”D = 63LBS
